

Pilli: CAD holes in membrane so these can be inserted.

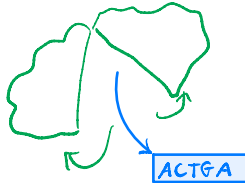

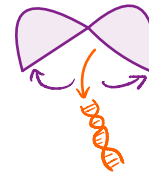

Ribosomes: contained within the membrane.

Membrane: breaks into 2 halves

Nucleoid Region: breaks in half, contains bacterial genetic information.

Plasmid: where we add the gene we want to replicate.

This will also break apart to show our gene of choice!

Alongside the 3D-printed components, we will have instructions:

Instructions:

Plasmid: \_\_\_\_\_

Pilli: \_\_\_\_\_

Nucleoid Region: \_\_\_\_\_

Ribosomes: \_\_\_\_\_
